google developers group.

Joining the GDG Girona team has been a key experience in the recent years. What began as an initiative to help a friend out has grown into a lovely team and an active community.

Through organizing tech events I've learned skills like networking, handling logistics, working with a budget. "Soft skills" should be renamed to "invaluable skills". There's nothing that teaches you to act on your feet like a speaker's train getting delayed, or an issue communicating with your catering provider.

Although I'm a little far away now, I still support the team I helped build with my co-organizer and bestie Lila.

You can find us on Instagram or LinkedIn.

videogame design and development.

Studying game design sometimes means, shockingly, actually making (The sarcasm comes from endless hours trying to figure out how a NAT network works and debugging thousands of C++ program lines.)

The project I loved the most was "Guardian of the Breadth". It's buggy and incomplete, but what came from those three months of work feels like the first real game I've made.

I was able to research and put SCRUM methodologies into practice by leading my team, acting as an art director and team manager. I also learnt what a "technical artist" is and discovered my passion for making shaders that barely work.

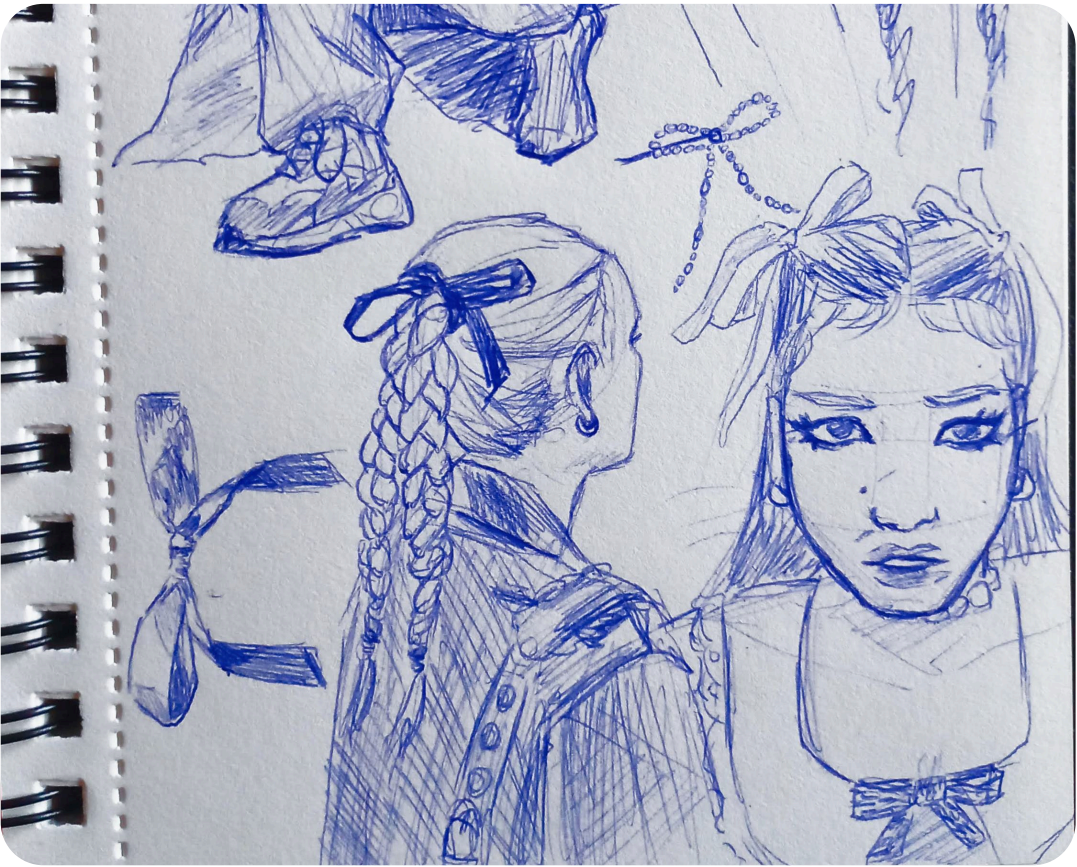

In this project, I contributed what I love: doing a bit of everything. I programmed a few game mechanics, designed some 3D elements, integrated the sound design, and created a few shaders that give the game its unique visual style.

illustration and graphic design.

I got my Wacom Intuos Draw for Christmas about 10 years ago. What followed has been a series of phases where I loved digital illustration, then I didn't, then I did again.

I've kind of always had a notebook and a pen in my hand.

written works.

Storytelling was the reason I studied my degree. Dreaming up stories and situations has always been my go-to way to pass the time. It even once got me an award!
